

Flea & Tick Facts

- The female **flea** consumes 15 times her own body weight in blood daily and can produce about 20,000 new **fleas** in 60 days.
- Female **ticks** can consume 200 times her body weight and will lay anywhere from 2,500 to 3,000 eggs at once.
- One **flea** can bite an animal 400 times in one day.
- There are anti-inflammatory and anesthetic compounds in the saliva of hard **ticks** that make it less likely for their host(s) to notice that they've been bitten.
- **Fleas** can jump 110 times their length
- **Ticks** do not fly, jump or fall from trees. They generally crawl up their hosts from the tips of grasses and shrubs.
- Winter does not always kill **fleas**. Many larvae find warm spots to hide out until temperatures are more hospitable.
- **Ticks** carry diseases that can harm pets and people such Lyme, Ehrlichia, Rocky Mountain Spotted Fever, and Babesia.
